Seas and oceans offer huge biodiversity, play an indispensable role in climate change mitigation, and provide food and employment to people. Certain structures such as coral reefs and seagrass meadows protect the coasts against storms and flooding. Coastal areas provide a nursery habitat for many ecologically and economically important species. The ocean is a source of food through fisheries and aquaculture.

# New: Marine Policy Pages

## Biodiversity Strategy

- Increase area of Marine Protected Areas to 30%
- Increase strictly protected areas to 10%
- Improve management
- Nature Restoration Targets

# New: Marine Policy Pages

## European Maritime, Fisheries and Aquaculture Fund

- creating and managing MPAs
- protection measures established by the Marine Strategy Framework Directive
