The EUROPARC Junior Ranger Programme is a network and platform for engineers, scientists, and teachers who actively promote and develop junior ranger programmes within protected areas. It is promoted and developed by the EUROPARC Federation in European Protected Areas. Connecting with and supporting the activities of the more than 1200 protected areas in the network, it encourages members to develop activities for this age range. Since 1994, the first Junior Rangers were born in Brandenburg, Germany, and the project has grown to include 86 protected areas, with 40% of them located in Germany.

**What are Junior Rangers doing?**
- Delivering educational activities and ranger work experiences
